# SAMAWATT solves an \$20 billion a year **challenge** for wind and solar farm operators

## CHALLENGES

- > High volatility of electricity prices on a daily basis impacts the sales of renewable energy to the wholesale market
- > Volume of power has to be committed to the grid on a daily basis for the following day
- > Impossible to guarantee the committed wind and solar power volumes due to unreliable weather forecasts
- > Discrepancy between committed and actual power injection leads to high potential imbalance penalties (up to 20 times the market price)

**SAMAWATT's** proprietary algorithm **improves** renewable energy owners' **ROI** by **significantly** reducing recurrent grid imbalance penalties.

# OptimalAsset™ is an integrated software for renewable park operators selling electricity in the wholesale market
